

Reviews of God in the Lab: How Science Enhances Faith

"Many books have been written from a faith-friendly perspective, showing how the Christian faith creates intellectual space for the natural sciences. Dr Ruth Bancewicz, a former research biologist, has given us a work that moves this discussion up to a higher level... Readers will find much within these pages that is helpful, stimulating, and challenging."

Professor Alister McGrath, Andreas Idreos professor of Science & Religion, Oxford

"Ruth Bancewicz ... demonstrates that there is no great discontinuity between science and other human quests for truth, including religion."

Revd Dr John Polkinghorne, KBE, former President of Queens' College, Cambridge

"Written with rigour, creativity, and the day-to-day insight of a true scientist. [God in the Lab] has widened the horizons of the science and faith debate by bringing new and needed perspectives. I heartily recommend it."

Dr Sharon Dirckx, Senior Tutor, Oxford Centre for Christian Apologetics, and former brain imaging scientist

"Highly readable ... Peppered with interesting facts and anecdotes, this is for everyone interested in the conversation between science and faith."

Dr Denis Alexander, Emeritus Director, The Faraday Institute for Science and Religion

"On a topic so often dominated by the culture wars, Dr Bancewicz brings a fresh and much-needed emphasis on wonder to conversations about science and Christian faith. She reminds us that the beauty, awe, and creativity of the natural world points to its Creator. This readable book would make a great gift for a pastor or student."

Dr Deborah B. Haarsma, Astronomer and President of BioLogos

"Ruth Bancewicz's beautifully-written book demonstrates how science enhances faith, with many examples from real scientists who are Christians, and many memorable quotations. This is a great book to give to those who believe there is a conflict between science and faith."

Professor Sir Colin Humphreys, Emeritus Professor, Department of Materials Science and Metallurgy, University of Cambridge, and President of Christians in Science

"[God in the Lab] is both well researched and contains a fresh and inspiring personal narrative. It should reignite in others a passion for the friendship between science and religious belief."

Revd David B. Rowe, former Warden of the Lee Abbey Community
